

SAAB 93/95 OEM Steering Control Interface For Parrot Bluetooth CK3000

Based on Parrot's own technology and powered by its Chip "Parrot3", Parrot CK3000 provides robust Voice Recognition and performs Full Duplex Echo Cancellation, making it resistant to noise and double-talk.

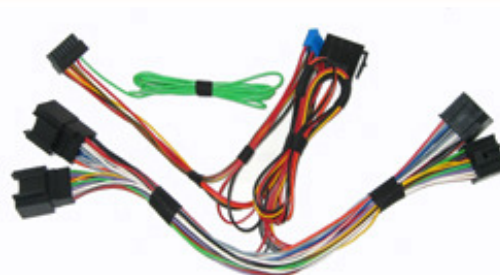

The CK3000 is the most advanced hands-free car kit on the market. With the Parrot CK3000, you are able to handle calls in comfort and safety, without ever touching your mobile. Voice recognition enables you to place calls with both hands on the wheel, without taking your eyes off the road. The wireless connection between the CK3000 and the Bluetooth phone is enabled as long as the phone is turned on. With the InCarTec equipment you can now hard-wire the CK3000 to your Saab 93/95 steering wheel controls. This will give you total control of all calls without your hands ever leaving the wheel.
